Anekal, Bengaluru

<https://github.com/rohitkvanjre>

Objective

Detail-oriented Computer Science Engineering student with expertise in full-stack development, Python, and Android system architecture. Proven track record of engineering scalable solutions, including zero-touch network deployment systems that significantly reduce operational overhead and robust offline-first mobile applications.

Education

Bachelor of Engineering (B.E) in Computer Science and Engineering

2023-2026

SRI SAIRAM COLLEGE OF ENGINEERING, Anekal, Bengaluru

CGPA: 7.31

Diploma in Computer Science and Engineering

2020-2023

Sri Jayachamarajendra (Govt.) Polytechnic Bangalore

CGPA: 8.67

Experience

Android App Development using Gen AI Intern. MindMatrix, Bengaluru (February 2026 - July 2026)

- Executed the complete Software Development Life Cycle (SDLC) for "Rakta-Seva Connect," an emergency blood donation Android application built with Kotlin and MVVM architecture.
- Engineered the system architecture and database design using Firebase Cloud Firestore, integrating Authentication and Cloud Messaging (FCM) for real-time emergency request handling.
- Designed complex business logic, including automated 90-day donor eligibility verification and secure privacy controls to mask donor PII until request acceptance.
- Authored comprehensive Software Requirement Specifications (SRS) and modeled system workflows using Data Flow Diagrams (DFD) and Use Case mapping.

Intern at Analogica Software Development PVT. LTD. (June 2023 – August 2023)

- Gained foundational knowledge in Database Management Systems (DBMS) and Python programming, including data structures.
- Learned basic concepts of Statistics, Artificial Intelligence and Machine Learning (AIML).
- Developed a solid understanding of programming logic and data handling.
- Enhanced analytical and problem-solving skills by working on practical examples related to AI and ML.

Publication and Technical Writing

- “Unveiling the Magic of Matplotlib: Exploring Python’s Data Visualization Library”
Certisured – June 2023
Authored a tutorial on Matplotlib covering installation, plotting techniques, and data visualization best practices.
<https://certisured.com/blogs/matplotlib>
- “Smart Network-Based Automated Software Deployment for Multi-System Lab Environments”
IJIRIS Journal, Vol. 11, Issue 08, Nov 2025
<https://doi.org/10.26562/ijiris.2025.v1108.25>

Projects

1. Intelligent Attendance Automation with AI

Technologies used: Python, OpenCV, MTCNN, InsightFace, SQLite, ReactJS, ChatGPT (AI-assisted coding and documentation)

- Designed and deployed a Flask-based application to automate attendance tracking using image data.
- Engineered a backend system in Python and OpenCV to process image data and match it against a student pre-stored database.
- Leveraged ChatGPT for code generation, debugging, and documentation, critically refining AI-assisted outputs.
- Reduced manual effort and errors, demonstrating potential to improve attendance management efficiency, though not fully deployable yet.

2. Marketing Campaign Dashboard Prototype (Figma)

- Designed an interactive dashboard prototype in Figma to visualize campaign performance metrics.
- Focused on clarity and usability for non-technical stakeholders to quickly track KPIs.
- Showcased product-thinking and visualization skills applicable to product analyst roles.
- Livelink:
<https://www.figma.com/make/bOO7fWbgt3TokqlrVPejaU/Lead-Management-System-CRM?node-id=0-1&p=f&fullscreen=1>

3. Smart Network-Based Automated Software Deployment (Master-Slave System)

Technologies Used: Python, Multi-threading, Socket Programming (TCP, UDP), Subprocess, SQLite, TLS, Tkinter, SHA-256 Hashing, Windows Services, psutil.

- Designed and deployed a resilient Master-Slave architecture for remote, zero-touch provisioning and configuration management across heterogeneous networks (LAN/Wi-Fi).
- Developed a Tkinter-based GUI for the centralized Master node and utilized SQLite to maintain real-time inventory and client status logs.
- Engineered multi-threaded Python agents (Windows Services) that reduced manual software installation time from 5+ hours (180 clients) to a single, 2-minute command execution, eliminating significant operational overhead.
- Implemented a persistent, asynchronous command queue and heartbeat mechanism to guarantee task completion and maintain real-time connectivity telemetry, improving system resilience and management accuracy.
- Secured the deployment pipeline using TLS encryption and cryptographic SHA-256 integrity checks on all distributed software binaries, mitigating security risks and configuration drift.

4. Rakta-Seva Connect – Emergency Blood Donation Mobile Application

Technologies Used: Kotlin, Android Studio, Firebase Authentication, Cloud Firestore, Firebase Cloud Messaging (FCM), Figma

- Developed a mobile healthcare application using Kotlin to connect blood donors and requesters, featuring an emergency-optimized UI designed in Figma.
- Engineered the backend architecture integrating Firebase Cloud Firestore for real-time data synchronization and implemented secure, OTP-based user authentication.
- Built comprehensive core modules for donor registration, real-time emergency blood requests, and targeted push notifications utilizing Firebase Cloud Messaging (FCM).
- Programmed strict business logic enforcing a 90-day donor eligibility validation and integrated privacy controls that mask user contact details until a request is explicitly accepted.

Certifications

- Pandas and NumPy Tips, Tricks, and Techniques — Infosys Springboard, 2024
- Data Visualization in Python by Examples — Infosys Springboard, 2024
- Introduction to Data Science — Infosys Springboard, 2024

Skills

- **Programming Languages:** Python, Java, C, Kotlin
- **Web and Mobile Development:** Android (Jetpack Compose) ReactJS, HTML, CSS, JavaScript (basic)
- **Databases:** SQLite, MySQL (basic)
- **Libraries & Tools:** OpenCV, Pandas, NumPy, Matplotlib, Seaborn
- **Concepts:** Data Structures, Algorithms, Artificial Intelligence, Machine Learning, Data Visualization.
- **Design & Visualization Tools:** Figma (wireframing, prototyping, dashboard design)
